

1    **ABSTRACT OF THE DISCLOSURE**

2            A golf club head for a metal wood includes a body and a faceplate. The  
3    body has a front face having a recess. The faceplate is mounted in the recess and  
4    includes an outside plate and an inside faceplate. The outside plate has a  
5    thickness that is 1.0 to 2.0 millimeters and is made of high strength material. The  
6    inside plate has a thickness that is 0.5 to 1.8 millimeters and is made of high  
7    strength material. The inside plate, which is hollow or meshed, is connected to  
8    the outside plate. Therefore, the COR of the faceplate will be more consistent,  
9    and the faceplate can be fabricated with a large area.
